

MiniBoost Pedal

A super simple circuit that provides up to 26 dB of a clean boost using a JFET. This pedal is great for boosting solos or giving weaker pickups some more body. Clear and transparent, it will really help your guitar tone stand out in the mix. Bonus feature - it also acts as a buffer. (Only available in a mini enclosure which cannot take a battery.)

Controls

Volume - control to adjust the overall level of the pedal.
(Not much to it, huh?!)

Features

- True-bypass
- 1/4" input jack
- 1/4" output jack
- 9V DC jack, negative tip (4mA current draw)
