

# RC Boost Pedal

A simple boost circuit that was originally used to brighten up darker vintage tube amps back in the day. As turns out, it also added some sweet overdrive to the tone and many guitar players added this device to their rig as a secret weapon. (Only available in a mini enclosure which cannot take a battery.)

---

## Controls

**Volume** - control to adjust the overall volume of the pedal.

**Phat** - switch to engage a thicker tone.

## Features

- True-bypass
- 1/4" input jack
- 1/4" output jack
- 9V DC jack, negative tip (4mA current draw)

Made in the USA
