

# Splinter Distortion Pedal

A true “renaissance” distortion pedal, this pedal provides a wide range of hard-clipping distortions using a single opamp with a low slew rate. It can give you anything from a sweet overdrive to a near fuzz-like tone and everything in between. The pedal also comes with 2 switches for up to 5 different combinations to select alternate versions of this popular circuit from over the years.

## Controls

**Volume** - control to adjust the overall volume of the pedal.

**Filter** - control that provides a high-cut filter to darken the tone.

**Distortion** - control to adjust the amount of gain.

**Type** - switch between diode type - silicon, LED, or germanium.

**Clipping** - switch between symmetrical (left) & asymmetrical (right) clipping (*doesn't apply to LED diodes.*)

## Features

- True-bypass
- 1/4" input jack
- 1/4" output jack
- 9V DC jack, negative tip (4mA current draw)
- Internal 9V battery clip\*

Made in the USA
